Presentation 1	
Title	Impact of learning style on children in the classroom.
Research Questions	How can I improve students' level through learning style? How do learning styles affect students' motivation towards math and science lessons?
Conclusion	Research questions critical outcome is that it is essential to integrate learning styles according to student needs to support their participation during their learning. Teachers should know their students' styles to manage the student's behavior and level. Also, using data tools to find information about the students is so important for the teachers, they can use different tools to cover the information they need.
Reflection	I have learnt the meaning of learning style that means a method of effortlessly receiving, processing, remembering, and applying knowledge. And it related to the theory of multiple intelligence. The common things between the theory of intelligence and learning methods are some children learn by hearing, some by movement, and some by sight. Moreover, learning style is a fundamental procedure to meet direct students' knowledge.

Presentation 2	
Title	Digital storytelling
Research Questions	How does digital storytelling impacts student engagement and interaction? What elements of digital storytelling can be incorporated to promote efficient learning?
Conclusion	It was seen how the introduction of digital storytelling in the classroom environment helped ensure that the students were able to understand the concepts better.
Reflection	I have learnt that digital media product has become a highly common approach of communication and it has contributed towards increasing the oral and written. The impact of digital media or computerized devices on learning is increased understanding of topics. Impact on interaction is demonstrate higher, and students can interact with teacher. And the impact on engagement is provides an opportunity to interact with one another.

Presentation 3	
Title	Art in education.
Research Questions	The importance of art in students learning. How does art effect students' performance?
Conclusion	In conclusion, the particle implication that I found, arts education is crucial since it increases performance. As studies show that arts increased academic skills, school attendance, critical thinking skills, and creativity in students' performance.
Reflection	I have learnt from this presentation that including art into student's education can help them study more effectively. The presenter said her main strategies in collecting data for the research. First, she observes the art activities used in class. Second, collect data, and take notes. Third step, evaluate the use of arts in the learning process. This step called the implementation strategies. Allowing students to participate in arts class helps them to improve their motor skills, language skills, social skills, decision making, and creativity.
